

FILTER INTERCHANGE FIT

Compatible filters that *Do NOT* Alert a *Water-in-Fuel* condition when a new Signal Filter is not available.

What to do if you need to replace your Signal Filters fuel filter and you don't have a spare? Our filter can temporarily be replaced with any OMC 1-12 thread fuel filter. Your system will still work but a fault signal will be displayed while the temporary filter is used. Remember that without our internal probe you will not receive water in fuel alerts. *We recommend that you order a new Signal Filter and replace the temporary filter as soon as it is convenient.*

List of common fuel filters with an OMC 1-12 thread:
