**Entratech Systems announces the completion of its latest building addition.**

Sandusky, OH: Entratech Systems, a manufacturer of engineered smart sensor and controller solutions has completed its latest addition of manufacturing space in anticipation of manufacturing a new fuel system product now in development. Entratech Systems provides FAST design, prototyping, manufacturing and assembly of high, medium and low volume sensor assemblies.

Mike Richardson, President said, " We are looking forward to setting up this space for our latest product, developed for marine industry fuel systems. We supply sensors that withstand the test of time, delivering years of unmatched performance."

Entratech specializes in water in fuel sensors for diesel, gasoline and aircraft fuels. OEM manufacturers have relied on the consistent quality of **Entratech** sensor technology for over 32 years. We partner with customers' engineers to help design and build dependable sensor solutions including water-in-fuel sensors and low coolant sensors.

**Entratech sensors are used to sense and protect equipment including:**

- **On highway Truck Engines**
- **Off-road and Marine Engines**
- **Ag Equipment**
- **Power Generation Equipment**
- **Recreational and Military Vehicles**

**Entratech** sensors are made and assembled in Sandusky, Ohio about 1 hour west of Cleveland Ohio.
